Science Fair Warm-Up: Learning the Practice of Scientists (Grades 7-10) - PB328X3 John Haysom Even science fair enthusiasts may dread grappling with these two questions: 1. How can you organize many middle and high school students doing many different projects at the same time? 2. How can you help students while giving them the freedom of choice and independence of thought that characterize genuine inquiry? Answer the questions and face science fairs without fear with the help of this book from the Science Fair Warm-Up series. This book, for grades 7 10, develops the ideas about practices that students learn in the first book. Students will also find that the two-star problems are much more cognitively demanding. In addition to offering original investigations, the book provides problem-solving exercises to help students develop the inquiry skills to carry the projects through. To save you time, the materials are organized to grow more challenging and encourage independent study as students progress through the grade levels. To help you meet your teaching goals, the series is based on the constructivist view that makes students responsible for their own learning and aligns with national standards and the new Framework for K 12 Science Education. Science Fair Warm-Up will prepare both you and your students for science fair success. But even if you don t have a science fair in your future, the material can make your students more proficient with scientific research. "An exciting publication that engages students and fills a need for innovative and conscientious teachers. Students and teachers are likely to encounter real science with the ideas, approaches, and questions the materials encourage. Robert Yager, Professor Emeritus at the University of Iowa and past president of NSTA
